CONTRIBUTION TO LEED CERTIFICATION

2024

JUUNOO CONTRIBUTION TO LEED CERTIFICATION

JUUNOO products are instrumental in supporting commercial interior projects in accruing points and meeting requirements for LEED certification.

It is crucial to understand that no single product can garner points independently. The subsequent list delineates how our product may contribute to satisfying each guideline, in accordance with the most recent LEED guidelines (v4.1). However, the application of JUUNOO must be supplemented with additional design characteristics and tactics to fully meet each standard.

For the comprehensive LEED Rating System, please visit www.usgbc.org/leed.

For JUUNOO products, the most likely rating system to be used will be ID+C ([LEED certification for new interiors](#))

Details: [LEED v4 IDC 07.25.19](#)

Impact category	Credit	Points	Option(s)
Materials and resources (MR)	Interiors life-cycle impact reduction	1-2	Design for flexibility (2)
	Environment product declarations	1-2	1) Use vendors with EDP's (1) 2) Multi-attribute optimization (1)
	Sourcing of raw materials	1-2	1) Raw material source and extraction reporting (1) 2) Leadership extraction points (1)
	Material ingredients	1-2	1) Material ingredient reporting (1) <i>or</i> 2) Material ingredient optimization (1)
	Construction & demolition waste management	1-2	Reduction of total waste material (1-2)
Indoor Environmental quality	Low-emitting materials	1-3	1) Product category calculations (1-3) <i>or</i> 2) Budget calculation method (1-3)
	Acoustic performance	2	<i>Single option</i>
Innovation	Innovation	1
